A phase locked loop, PLL, is basically of form of servo loop. Although a PLL performs its actions on a radio frequency signal, all the basic criteria for loop stability and other parameters are the same. In this way the same theory can be applied to a phase locked loop as is applied to servo loops. Basic phase locked loop basic diagram

The phase locked loop or PLL is an electronic circuit with a voltage controlled oscillator, whose output frequency is continuously adjusted according to the input signal's frequency. A Phase locked loop is used for tracking phase and frequency of the input signal. It is a very useful device for synchronous communication.
